- Ability to work and lead cross-functional, multicultural team members for profitable completion of projects.
- Knowledge of different kinds of work culture which has proved to be a good team player.

## Projects

---

## 1. SMS (Store Management System)

**Project Description:** A cost-effective and efficient Store Management System is very critical to ensure smooth running of your retail business. These systems must be driven by access to real-time customer information. Store Management System enables retailers to streamline in-store activities, improve merchandise management, reduce labor costs, support remote store processes, and manage true store-level profit and loss. Key Features are Product Management and Product Performance, Order Management, Affiliate Management, Reporting

**Development Environment:** Visual Basic 6.0, Oracle.

## 2. E-cops

**Project Description:** E Cops Project is web based police management software which is specially designed for police department for managing crime related information. Ecops is a web based application which will be available for every citizen to lodge a complaint and report a crime. This application will provide a platform for public to report about crime to nearest police station without any fear.

**Development Environment:** Java, Oracle.

## 3. Effective pattern discovery for Text mining

**Project Description:** The project focused on developing efficient mining algorithm for discovering patterns from large data collection. and search for useful and interesting patterns. In the field of text mining, pattern mining techniques can be used to find various text patterns, such as frequent itemsets, closed Frequent itemsets, co-occurring terms. In this, proposed system can take sufficient .txt file as inputs & apply various algorithms & generate expected results. keywords are Text mining, text classification, pattern mining, pattern evolving, information filtering.

**Development Environment:** Java , MySQL.

## 4. Natural Disaster Monitoring Alert Using IOT

**Project Description:** Natural disasters like Land sliding , Forest Fires, Tornado and earthquakes are the great threats towards the mankind which cannot be prevented but careful planning of the emergency measures by 'alert' system can often reduce disastrous consequences. The system focuses on monitoring water level, earth vibrations via sensors, And generates alert signal when water level or level of earth vibrations crosses a threshold. Alert message is Text Message And Android app notification Service to the concerned authorities through their mobile phones. It also includes Public address (PA) system to broadcast the messages to the local people, nearby the Forest side.

**Development Environment:** Java , MySQL .
